Private Limited, Trichy**

This Memorandum of Understanding (MOU) is made at Sivakasi on the First day of June, 2015.

By and between

M/s. Ebek Language Laboratories Private Limited, a company incorporated under the Companies Act, 1956, having its registered office at 68, Parvathi Ammal Nagar, Veereswaram, Srirangam, Trichy – 620 006, Tamil Nadu, represented by its Vice President, Mr. Neslyn Johnson as its authorised signatory, hereafter referred to as "Ebek".

and

The Standard Fireworks Rajaratnam College for Women, Thiruthangal Road, Sivakasi, Virudhunagar District, hereafter referred to as "The Institution", represented by its Principal, Dr. (Mrs.) D.Sasireka as its authorized signatory, hereafter referred to as "SFRCW".

Ebek and The Institution shall hereinafter be collectively referred to as "Parties" and individually as a "Party".

WHEREAS:

Ebek is the authorized Examination Center for Cambridge English Language Assessment (Cambridge English) for the conduct of the BEC Exams and is in the business of conducting English language training programmes under its trade mark "EBEK" and has acquired a reputation for providing spoken and written English Language communication classes of global competence.

The Standard Fireworks Rajaratnam College for Women, Sivakasi, was established in 1968. It is affiliated to the Madurai Kamaraj University. The Institution's unshakable mission is to empower rural women with communicative competence and employability potentials to compete in the global scenario and confront the challenges. SFRC's commitment to the cause of academic excellence through diligence has led to a number of academic innovations.

The Institution wishes to conduct BEC - Cambridge English Language Assessment (Cambridge English) to benchmark the language skills of their students to international standards. Hence, the Institution will partner with Ebek for the conduct of the BEC examination which is part of the Cambridge English Language Assessments and Ebek has agreed to the same subject to certain terms and conditions mutually agreed between the Parties. The Parties are desirous of recording the terms of the collaboration agreed to between them.

NOW, THEREFORE, in consideration of the mutual understanding and agreements set forth herein, the Parties hereto hereby agree as follows:

I. TERM

This MoU shall come into effect on this date and shall be valid for a period of three years ("Initial Term") unless otherwise extended in writing by the Parties or terminated in accordance with the terms hereof.

II. GRANT OF RIGHTS

The Institution hereby grants to Ebek the exclusive right to train and conduct the BEC Exams within the premises of the Institution and Ebek hereby accepts the same.

III. OBLIGATIONS OF EBK

1. Ebek shall train and prepare students for the BEC Exams as required by the Institution.
2. Ebek shall conduct the BEC – Preliminary, Vantage and Higher Exams, Computer Based as well as Pen and Paper Based as applied for by the Institution.
3. Ebek shall be responsible for the question papers and the complete organization and conduct of the BEC Exams on the test dates as per stringent rules laid by Cambridge English Language Assessment.
4. Ebek shall be responsible for the question papers after the conduct of the BEC Exams.

IV. OBLIGATIONS OF THE INSTITUTION

1. The Institution agrees to register a minimum of 50 students for the Cambridge English: BEC Exams for each session applied for by the Institution.
2. The Institution works towards making BEC as part of the curriculum for the students.
3. The Institution shall collect all filled-in application forms and payments and hand over the same to Ebek before the deadline for applications, along with copies of College ID proof of students.
4. The Institution shall provide the necessary venue arrangements for the conduct of the BEC Exams as required by Ebek.
5. For the conduct of the Computer Based BEC Exams, the Institution shall provide Ebek with the necessary computer systems with LAN and internet connections (with system specifications as required by Cambridge English) and technical assistance throughout the conduct of the exams.
6. The Institution shall provide sound proof classrooms for the conduct of the BEC Speaking Exam. This shall be made available for days requested by EBK.

V. SUPPORT FROM EBK

1. Will organise a one day teacher training workshop which will help teachers in preparing themselves and students for the Cambridge English BEC Exams.
2. Provide the Institution with quality assurance as required on the testing process.
3. Work with the Institution as reasonably required on any other issues relating to teaching and testing English for its students.
4. Provide BEC preparation material free of cost to students who register for the BEC Exams.
5. Conduct BEC mock tests for students who register for the BEC Exams.
6. Provide the Institution with approval to use the Cambridge English Preparation Centre Logo in all publicity material, including the institution's website, subject to the Institution registering a minimum of 500 candidates a year for the BEC Exams. However, the Institution must seek Ebek's & Cambridge English's approval to ensure that the use of Cambridge English Preparation Centre logo is within the specified guidelines. The Institution can also be made an approved Cambridge Preparation Centre, subject to the institution registering a minimum of 100 students in a year for the BEC Exams.

VI. COMMERCIAL TERMS

1. The commercials given below are the BEC Exam Fees. This fee shall be applicable till June this year and will change accordingly if Cambridge English changes the exam fee for BEC.

BEC Preliminary – Rs 2600

BEC Vantage – Rs 3300

BEC Higher – Rs 4300

VII. PAYMENT TERMS

- a. 100% payment shall be made at the time of submitting the BEC Exam Application forms.
- b. The fee decided for 2015 is applicable till June this year. There may be changes in the current or subsequent years depending upon the BEC exam fees set by the Cambridge English.

VIII. CONFIDENTIALITY

Abstract Blend polymer electrolytes with optimized composition (92.5 PVA:7.5 PAN) doped with lithium triflate (LiCF_3SO_3) have been prepared in different concentrations by solution casting technique, using DMF as solvent. The prepared electrolytes have been characterized by XRD, FTIR, DSC, AC impedance, and SEM techniques. The complex formation between the blend polymer and the salt has been confirmed by X-ray diffraction and FTIR analyses. Differential scanning calorimetry thermogram has shown a decrease in glass transition temperature with the addition of salt. It has been observed that the ionic conductivity of the doped blend polymer electrolyte increases as the salt concentration increases. The ionic conductivity has been found to be $4.0 \times 10^{-5} \text{ S cm}^{-1}$ for 92.5 PVA:7.5 PAN:50 M wt% LiCF_3SO_3 sample at room temperature. The temperature dependence of ionic conductivity has been studied with Arrhenius plot and the activation energies have been calculated. Primary lithium ion battery has been constructed with the configuration $\text{Zn} + \text{ZnSO}_4 \cdot 7\text{H}_2\text{O} / 92.5 \text{ PVA:7.5 PAN:50 M wt\% LiCF}_3\text{SO}_3 / \text{PbO}_2 + \text{V}_2\text{O}_5$ using the maximum

conducting blend polymer, and its discharge characteristics have been studied.

Introduction

Lithium ion-conducting polymer electrolytes with high ionic conductivity have been of great interest owing to their applications in electrochemical devices such as battery, fuel cells, supercapacitors, electrochromic displays, etc. [1]. Developing new lithium ion-conducting polymer electrolyte having higher ionic conductivity, mechanical strength, lower cost, etc. has been an important issue. Over the past few years, the blending of polymers has been intensively investigated. Many blend polymer electrolyte systems have been studied and reported in the literature [2–5]. PVA is a semicrystalline and biodegradable polymer containing a hydroxyl group attached to methylene carbons which can be a source of hydrogen bonding. It has excellent film-forming nature, high tensile strength, and flexibility. PAN is a semicrystalline polymer having high strength and modulus of elasticity. It is a resinous, fibrous, or rubbery organic polymer which possess good mechanical strength. Its excellent mechanical properties are important in composite structures for military and commercial aircrafts. When these two polymers are mixed, the interactions between PVA and PAN are expected to occur through inter-chain hydrogen bonding between the hydroxyl group of PVA and nitrile group of PAN. This mixing of two polymers avails more number of polar groups for attachment of ions.

LiCF_3SO_3 is an impressive salt with a high acid strength, exhibiting great charge delocalization favorable to ionic dissociation in a solvating polymer matrix. When LiCF_3SO_3 is added to the polymer complex, the

Abstract

Novel proton conducting biopolymer Tamarind Seed Polysaccharide complexed with different concentrations of ammonium bromide have been prepared and characterized. The increase in amorphous nature of the sample has been confirmed by structural analysis. The complex formation between biopolymer and salt has been confirmed by vibrational analysis. The glass transition temperature values of the biopolymer membranes have been found by Differential Scanning Calorimetry analysis. The maximum ionic conductivity $1.58 \times 10^{-3} \text{ S cm}^{-1}$ is observed for 1g TSP: 0.4 g NH₄Br by impedance analysis. The conducting ions in the polymer network have been confirmed by transference number measurement. A simple battery has been fabricated with good stability of 1.54 V as open circuit voltage. The red light emitting diode has been activated by the battery constructed with the highest ionic conductivity membrane.

Abstract

Proton-conducting polymer electrolytes based on biopolymer, agar-agar as the polymer host, ammonium bromide (NH_4Br) as the salt and ethylene carbonate (EC) as the plasticizer have been prepared by solution casting technique with dimethylformamide as solvent. Addition of NH_4Br and EC with the biopolymer resulted in an increase in the ionic conductivity of polymer electrolyte. EC was added to increase the degree of salt dissociation and also ionic mobility. The highest ionic conductivity achieved at room temperature was for 50 wt% agar/50 wt% NH_4Br /0.3% EC with the conductivity $3.73 \times 10^{-6} \text{ S cm}^{-1}$. The conductivity of the polymer electrolyte increases with the increase in amount of plasticizer. The frequency-dependent conductivity, dielectric permittivity (ϵ') and modulus (M') studies were carried out.

Introduction

Fenton and Wright in 1973 were the pioneers of solid polymer electrolytes (SPEs) who worked with polyethylene oxide (PEO) and alkali metal salts. Since then, the field of solid polymer electrolytes gained a great deal of attention of the researchers. The main reason behind this was the advantages of using SPEs in solid-state devices like batteries, fuel cells, sensors, electrochromic displays and solar cells [1–3]. Other advantages of SPEs over conventional liquid electrolytes are

flexibility, molded to desired shape, mechanical strength, leak-proof and has good electrode-electrolyte contact. Previously, researchers' interests were towards the development of solid polymer electrolytes based on synthetic polymers like PVA [4], PVP [5], PAN [6], PMMA [7] and PVC [8] which exhibited good conductivity values. But currently, this has been adversely swapped with the biodegradable type through the employment of natural polymers. This effort has been undertaken to make the inventions go greener with the environment. Natural or biopolymers possess some outstanding criteria: (i) found in abundance, (ii) sustainable owing to its renewable nature that does not deplete as the petrochemical source, (iii) cheap in cost since it is a naturally occurring polymer and (iv) biodegradable nature that makes it more environmental friendly [9]. Several renewable resource-based biopolymers are suitable to be used as host polymer in the polymer electrolytes, such as starch [10], cellulose [11, 12], chitosan [13], carrageenan [14] and agar [15, 16].

Among all the biopolymers, agar-agar has gained a great attention due to its best film-forming capability. Agar is an unbranched polysaccharide, which is extracted from the family of seaweeds (Rhodophytae) having the structure of 1,4-linked-3,6-anhydro- α -L-galactopyranose. Agar forms a slightly viscous solution on dissolving in hot water and then becomes a thermoreversible gel when the temperature is brought down. It is widely used in the food industry, in cosmetics and for microbiology. Applications include use as a

Where as the colleges herein they are mutually agreed to enter into the organisation of a
programme named as "The Virudhunagar District Cluster of Colleges Joint Faculty Programme in
Mathematics" and further decided to make into writing of this document for better understanding and
pursuing programme in their colleges.

The Bylaws are as follows:

- The Standard Fireworks Rajaratnam College for Women, Sivakasi, will be the
co-ordinator for this programme.
- In the beginning of every academic year HODs of Department of Mathematics in
all the member colleges will meet at S.P.R.College for Women, Sivakasi during
the month of June to chalk out the programmes for that academic year.
- Each College will take care of one programme in that academic year.
- In the absence of HODs, any senior faculty member from the Department should
attend the meeting.
- The Programmes will be conducted only on afternoon of Saturdays.
- All or atleast a minimum of five II PG students accompanied by faculty members
from the colleges will attend the programmes without fail, M.Phil students can
also join.
- Teaching faculty from those colleges which do not offer PG course in
